CYBER CREDIT-TOKENOMICS

Tokenomics

There is a total supply of 1 Billion Tokens [1,000,000,000] available.

Token Supply:
1,000,000,000

Token Distribution

There is a total supply of 1 Billion Tokens [1,000,000,000] available.

The max amount of tokens purchased by a user participating in the presale is 5 Million [5,000,000] tokens, equivalent to 0.5% of the supply.

The first presale is conducted via CYBR on the Ethereum Mainnet. This means the CYBR token is being used as a launchpad token. Our price evaluation of CYBR will be higher than the Market Cap at the time of ICO launch.

The second and third presales are conducted via BNB on the Binance Smart Chain(BSC). The second presale will be more expensive than the first, and the third will be more expensive than the second.

Team member wallets will be made public for the Cyber Enterprise community.

Token Taxes

There will be an initial hardcoded 5% tax on the Cyber Credit Token. As our set goals are achieved, the tax will be reduced and be reallocated to CYBRC token holders. This tax is only applied on the seller's behalf and is not present for buys.

5% subject to Token Tax Distribution Smart Contract

0% is allocated and distributed amongst CYBRC holders until \$75k goal is reached.

4% subject to Token Tax Distribution Smart Contract

1% is allocated and distributed amongst CYBRC holders until \$150K goal is reached.

3% subject to Token Tax Distribution Smart Contract

2% is allocated and distributed amongst CYBRC holders once \$225K end goal is reached.

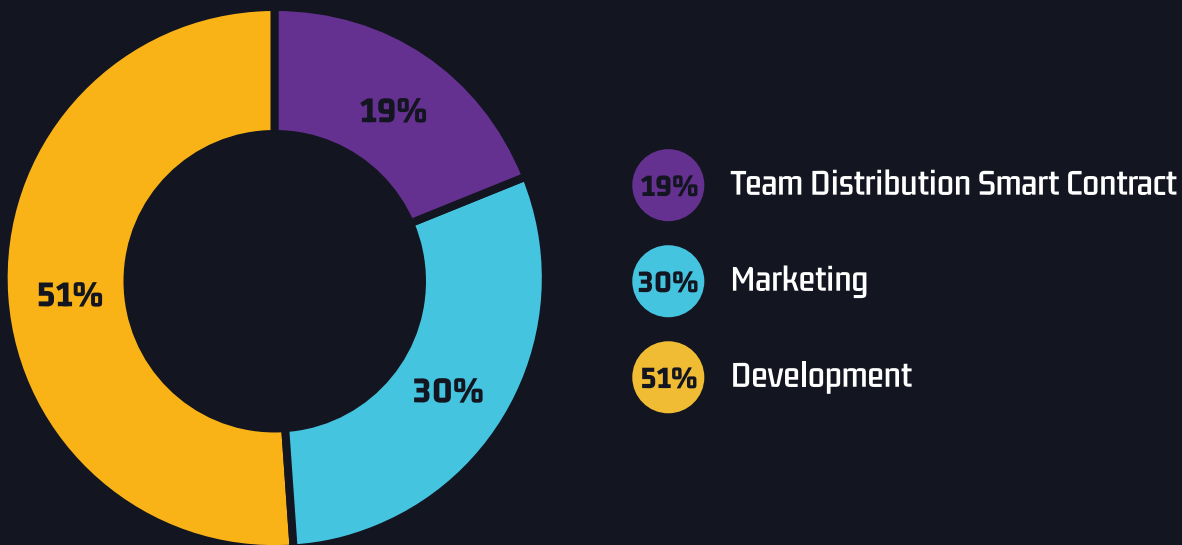

2% subject to Token Tax Distribution Smart Contract

3% is allocated and distributed amongst CYBRC holders once \$300K end goal is reached.

The only change is how much is allocated to the token tax distribution smart contract and to CYBRC holder rewards. The total between both will always be 5%.

Token Tax Distribution Smart Contract

Anti-Bot Code

Anti-Sniper Bot

Any buys that are initiated prior to the launch of the token and proper pairing will be blacklisted. This is to prevent sniper bots from purchasing the CYBRC token seconds after the pair is made live on PanCake Swap. This function will be turned on for 10 minutes after the liquidity has been made, and will finish right before we make an announcement on all of our social medias.

⚠ Important

Do not buy until we announce that the token is live, as we are not able to unblacklist your wallet meaning there will be a loss of funds.

We are unable to recover or allow any funds prior to 'our' official release of the Cyber Credit (CYBRC) Token. In essence these buys and wallets will act as dead wallets, and our contract won't enable them to trade.

We will be sure to make multiple public announcements on all of our social accounts and tools used to inform the community, once the pairing is live.

Anti-Sandwich / Frontrun Attack Bot

There will be a downtime before one wallet can make another purchase or sell. The downtime difference will be changeable, varying from 0-2 minutes between transactions. The sole intent is to prohibit sandwich attacks from happening within our ecosystem.

⚠ Important

This function will exclude the creator wallet.

How a Sandwich attack works

- 1 Detect the victim's transaction.
- 2 Front-Run the victim's transaction.
- 3 Victim transacts and suffers higher slippage.
- 4 The attacker then back-runs the victim.
