CYBER  
ENTERPRISE

[WWW.THECYBERENTERPRISE.COM](http://WWW.THECYBERENTERPRISE.COM)

Version 1.10.220326

## What is **The Cyber Enterprise Project**?

The Cyber Enterprise was created with the purpose of unity, anonymity, and individuality. Its primary aim is to have an ever-growing and developing decentralized ecosystem. The intent is to create a series of DApps that all function under the same umbrella, ranging from DeFi to entertainment. This will be paired with smaller projects as well, so the Cyber Ecosystem will be that one-stop-shop for all your crypto needs, thus creating the Cyber World.

## What is **The Cyber Enterprise (CYBR) Token**?

The CYBR token is the native token within our ecosystem running on the Ethereum Mainnet, created by the Cyber Enterprise team. Paying with the CYBR token will yield the cheapest fees on any symbiotic project created by the Cyber Enterprise working in the Cyber World ecosystem. Beyond this, CYBR will act as a launchpad token to get involved in the first round of future symbiotic project presales.

## What types of **Projects** are there?

Projects presented by the Cyber Enterprise are classified into 4 different tier classes (Tier 1-4). Our Tier 4 projects are also known as Symbiotic Projects, substantiated by the relationship they have with CYBR.

## TIER 1

Projects and services which focus on creating brand awareness, revenue, fundamental improvements to the project's basic utility. This can be viewed as Web Updates, programmatic NFT releases, listings etc.

## TIER 2

Projects with increased complexity, time to produce and required finances. These projects provide utilities to Tier 1 projects and further create brand awareness as well as **revenue streams** for the CYBR token.

## TIER 3

Projects that act as a foundational layer for all projects falling under the Cyber Enterprise. Its aim is to support user experience, provide infrastructure, and support the ecosystem's growth. The aim is to reinforce the one-stop-shop idea by providing the user with the platform, tools, and rewards for using the services.

## TIER 4 - SYMBIOTIC PROJECTS

Projects that provide utility to the infrastructures, where they directly impact the CYBR token in usability and functionality. An example would be the use of CYBR as the launchpad token for our first round of presale ICOs, or fees directly working to burn the CYBR token. These projects will have their own token acting as shares of a company working under an enterprise, which anyone can have a stake in.

# The Cyber **Enterprise**

## Tier 3: **The Cyber Swap**

One of the first Tier 3's we're looking into is creating our official swap. This will enable The Cyber Enterprise to provide rewards to those intending to stick around with us as we progress through this odyssey together. In addition to that, by its programmatic nature, a L2 solution will have to be put in place, in order to facilitate the designed operability.

### The reward stream will come in 2 forms:

#### **SuperCharging (Liquidity Providing)**

Holders will have the ability to become liquidity providers and earn rewards. You will yield the most of that respective token by doing so.

#### **ReCharging (Locking Tokens)**

Holders will have the ability to lock tokens for a portfolio reward of all the tokens within the Cyber Enterprise ecosystem. Have that be CYBR, CYBRC, any and all additional tokens.

## Tier 4 - Symbiotic Project: **TheCyberCreditors.com**

There are 3 phases to this specific symbiotic project. The creation of the CYBRC token (Cyber Credit), the 3 part ICO presale, and the creation of the Cyber Creditors platform. Our goal is to further develop other symbiotic projects after this one, all the meanwhile working on Tier 1-3 projects simultaneously.

The first Symbiotic project we are developing is the Cyber Creditors platform. Acting as a margin lending site. It tackles the issue of liquidating NFTs for quick cash. Using digital assets as collateral, CYBR will yield the cheapest fees for interacting with Ethereum (ETH) digital assets, such as ERC-20, ERC-721 and ERC-1155. The same goes for the Cyber Credit token (CYBRC), which will follow suit, but on the Binance Smart Chain (BSC). Any NFTs that are created by the Cyber Enterprise will be subject to reduced fees no matter which payment option is applied. All revenue from using our services will directly support the Cyber Enterprise ecosystem.
