TRANSPARENCY

About CYBR

As we have a clear idea and see the true potential that CYBR has to offer and can achieve, we feel obligated to break down the progress that the team has made throughout the project. Additionally, we wish to confront our past miscalculations to strengthen the trust within the CYBR community. We understand the importance of transparency and wish to address everything, especially that which may undermine the future of our project if an explanation is not provided. Early confrontation regarding issues encountered during the beginning of the project is a necessity to prevent the spread of misinformation and rumors. To remain silent is deadly, and we've determined doing so could be detrimental to the project's integrity. By correctly handling these circumstances we intend to prevent potential FUD, as we know ignoring it may act as a catalyst for it.

In our 'Transparency paper', we go over the initial difficulties of decision making, the challenges we faced before release, and how the CYBR team overcame it all to bring forth the project we have now.

The Start of an idea

At the beginning of what we know now as 'The Cyber Inu (CYBR)', but back then as a mere concept of what could be, disagreements and disputes in the DEV team took their course as they should in any healthy project. Have it be the name itself, the design/aesthetical look, or even what blockchain we wanted to release on. One thing that we could all agree to however was the underlying reason why we decided to get together and create this platform in the first place. It was to start a movement intended towards providing freedom and power to not only its holders but anyone who wished to use its services.

The team believed that the biggest threat in the 21st century is centralization, with a good example being the media. There censorship/creation of false or premature narratives directed by the establishments is the epitome of why centralization is becoming a negative thing. These narratives used to manipulate the masses give those that hold influence in media the capability of winning and tearing apart a country from within. The COVID-19 pandemic made us truly realize that this attack on basic freedoms and push towards centralization is becoming ever more prevalent. Governments passed new laws and bills using the cover of fear brought by the pandemic to their advantage by pushing centralized agendas. The virus may not go away but we shall adapt, however, implemented legislations created during these chaotic times shall remain.

Early idea developments

One of the first big decisions our team needed to discuss was deciding if we wanted to release on the Ethereum network as an ERC-20 token or Binance smart chain as a BEP-20. Both had their pros and cons and we quickly put together a list based on research and personal experience we had using both.

Overall we decided to go with ethereum due to its complete decentralized aspect and the accessibility to purchase ETH.

ERC-20 Pros	ERC-20 Cons	BEP-20 Pros	BEP-20 Cons
Decentralized	High Gas fee's	Semi-centralized	Low Gas fee's
Eth availability	Less swapping volume	Higher swapping volume	BNB availability (USA)
MetaMasask automatically connects to ETH main-net	The cost of making tokens and using is more expensive	The cost of making tokens and using BNB is very cheap	Manually need to connect to BSC on MetaMask
ETH net won't stop working due to the influx of traffic	More traffic and price volatility. (harder to spend)	Price doesn't change much, (easier to spend)	At times BSC can't handle the influx of traffic
More DApps	Already veterans working in the space, very competitive	New emerging NFT market	Fewer DApps
ERC-20 projects have a better reputation			BEP-20 tokens have a worse rep due to more scams

Artist/Art development

After agreeing to launch on the ethereum main-net, finding the right artist to make our ideal art and mascot become the next challenge. We went through multiple people, each one agreeing to sketch a design based on a description of what we'd like until we found the one. All the drawings on the website are LEGALLY owned by one of the DEVs, ONI, who went through the trouble of getting a lawyer and having a contract written up between him and the official artist. Additionally, here are some previous prototype sketches from various artists that helped us achieve the official art sketches presented later. Thank you all for sending us your designs.

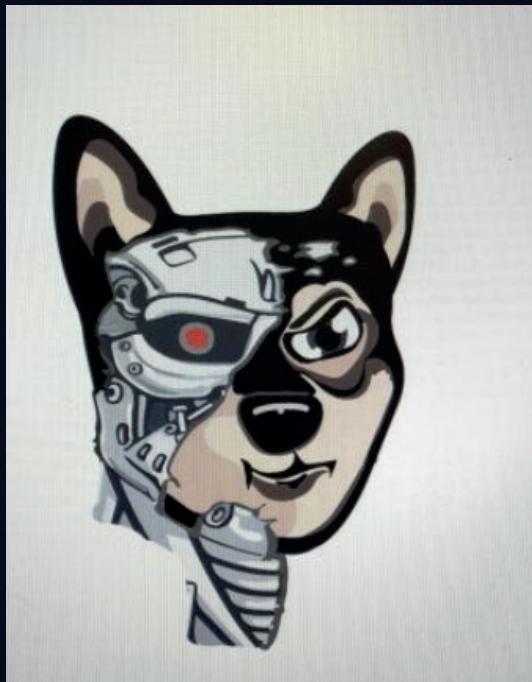

Artist #1-4, Did not get selected

First Token Design (artist #1)

First Mascot sketch received (artist #2)

Second mascot/token sketch (artist #3)

Third mascot sketch (artist #4)

Prototype sketches of Mascot and Token

Selected artist #5

First official sketch (artist #5)

First official stance sketch (artist #5)

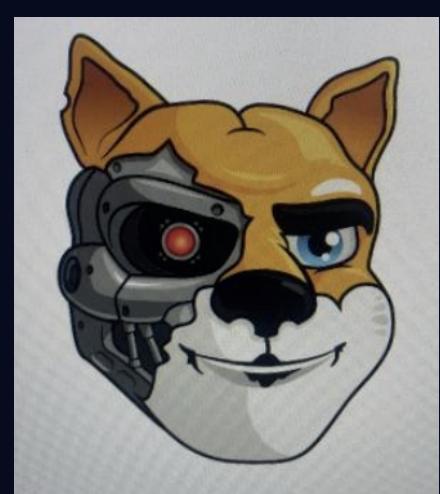

First sketch with robotic arm
(artist #5)

Detailing original Face (artist#5)

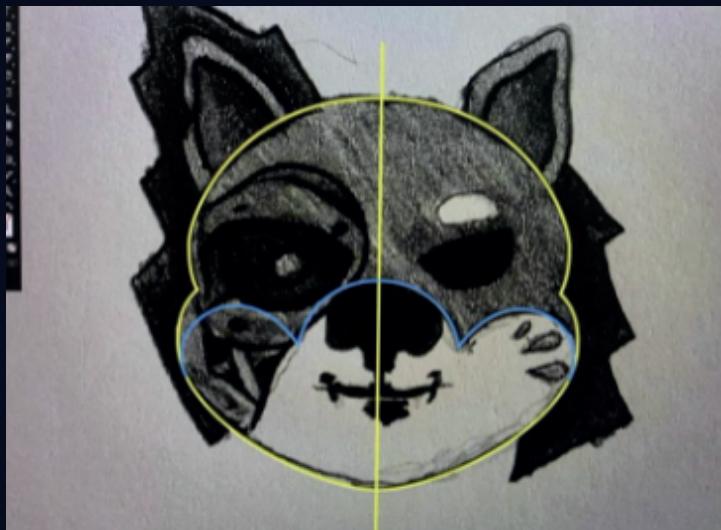

First attempt filling in body (artist #5)

Second Head Design (artist #5)

First complete prototype (artist #5)

First Token Sketch (artist #5)

Big jaw token sketch (artist #5)

Thick face token sketch (artist #5)

First official token sketch(artists #5)

Website Development

Creating a website was less of a challenge for us, but it was more time-consuming. One of the first things we did as a team was come up with the name and according to that proceeded to check if there was a domain available. It took us hours until we simply tried putting 'The' in front of the name of our liking and bam, we had our website name. With our connections we had access to a website developer and every week for almost 2 months, we sat down and updated the website adding texts and images as we progressed. We intend to continually update the website as more developments happen with the project eventually adding whole sub-domains.

Social Presents and Advertisement Capabilities

One of the first steps we took after agreeing on the official name was reserving that name we had on the major social media platforms which we achieved to the best of our ability. Creating a well-developed discord and telegram for communications followed, and soon discord nitro server boosting by 2 of the DEVs. The last step in this section was getting in contact with a Reddit user that not only had the 'karma' but the experience on the site to post into communities such as crypto moonshots, wallstreetbets, and others. This was achieved, and we focused on writing a mock-up recruitment post for discord Mods and Telegram Mods and creating a list of interview questions we would ask over voice chat to applicants.

Token Development

ONI, the DEV behind creating the token focused on the code for the majority of the project. He plans to join a scheduled AMA and go in-depth to tackle any questions you may have regarding the token itself. There is no minting feature and the team established that locking 5 ETH to liquidity is fair to give the token a solid start. Using the Ropsten test net he worked on ensuring the token was functional. The first attempt creating a smart contract failed however as a line of code did not save an unintentional duplicate was made out of the confusion. The first “CYBR” contracts created which can be seen here were immediately discontinued.

First contract attempts:

<https://etherscan.io/address/0x6e7a93dF160b95169483b264841C47d1532B84D3>

The following CYBR contract was made July 24th, 2021 and in terms of code, everything was working as it should. We were ready to launch on July 30th, 2021 and we did. CYBR token liquidity was sent to Uniswap and ETH was intended to be sent into liquidity, then a crucial mistake was made. Instead of sending the 5 ETH, we wanted to send 1 ETH first as a test and make sure it worked as it was our first encounter using Uniswap. Unbeknown to us this mistake restricted us from sending the remaining 4 ETH to liquidity. During the heat of the moment, we tried to think of solutions how to resolve this and with every passing minute the holder size was increasing and ‘sniper bots’ continued buying even after we had taken down our posts and social media presence. That’s when the executive decision was made to pull out and start again a week later. Those that invested were NOT scammed as we did send back the ETH they exchanged for CYBR the following days to come.

To every individual that got caught up in this failed launch, we deeply apologize for any and all inconveniences that were caused. We hope that sending back your ETH shows it was not our intent to cause you harm. For the record, we have color-coded the refunds to all the individuals that managed to invest in that short time frame and we thank you for your support.
