IMPORT CYBR-TOKEN

This document is a step by step guide demonstrating how to import the Cyber (CYBR) token into your wallet. In the example provided below, a MetaMask wallet is used to demonstrate this simple procedure.

The Cyber (CYBR) tokens address is provided below and is necessary. Please verify you are using the correct address, which can also be located on our Website.
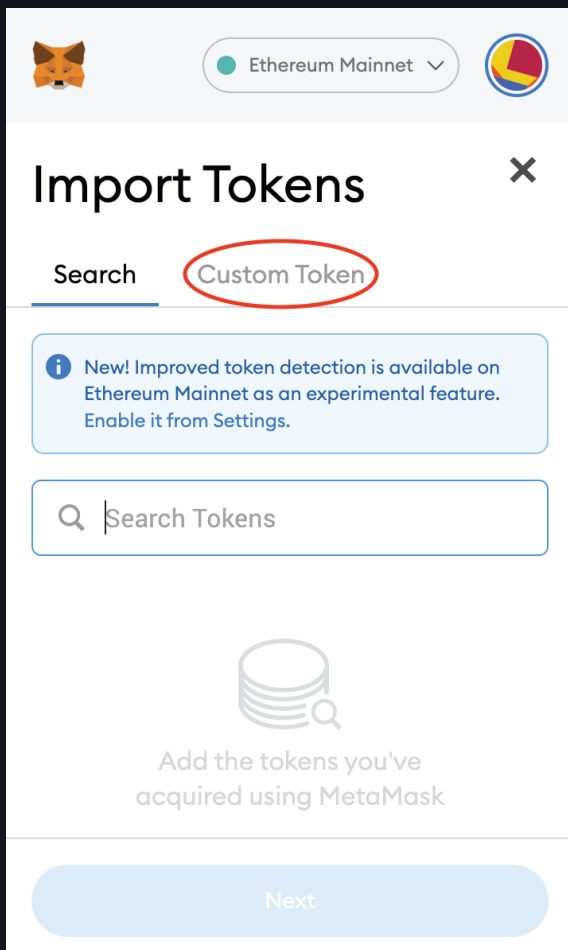

Token Address: **0x438a6E42813118548C065336844239b63ad4Fcfd**

How import CYBR token?

Step 1

In your wallet, you will need to croll down and then click on "**import tokens**" (see image below)
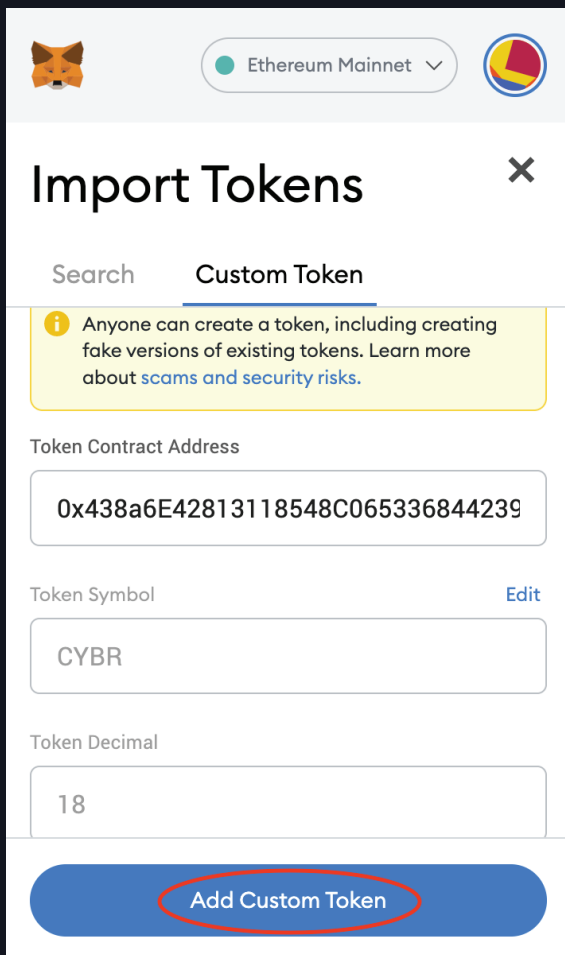

Step 2

After you click on "**import tokens**" you need to click on the "**Custom Token**" tab (see image below)

Step 3

On the "**Custom Token**" tab, in the "**Token Contract Address**" field - paste the new CYBR contract address.

IMPORT CYBR-TOKEN

The "**Token Symbol**" and "**Token Decimal**" fields should auto-populate. All you need to do is click on "**Add Custom Token**".

⚠ **Important**
Please verify that you are adding the correct token address:
0x438a6E42813118548C065336844239b63ad4Fcfd

Step 5

Once you click on "**Add Custom Token**" you will see a prompt to "**Import tokens**". Click on this and the newly imported Cyber (CYBR) token will have been added to your wallet.
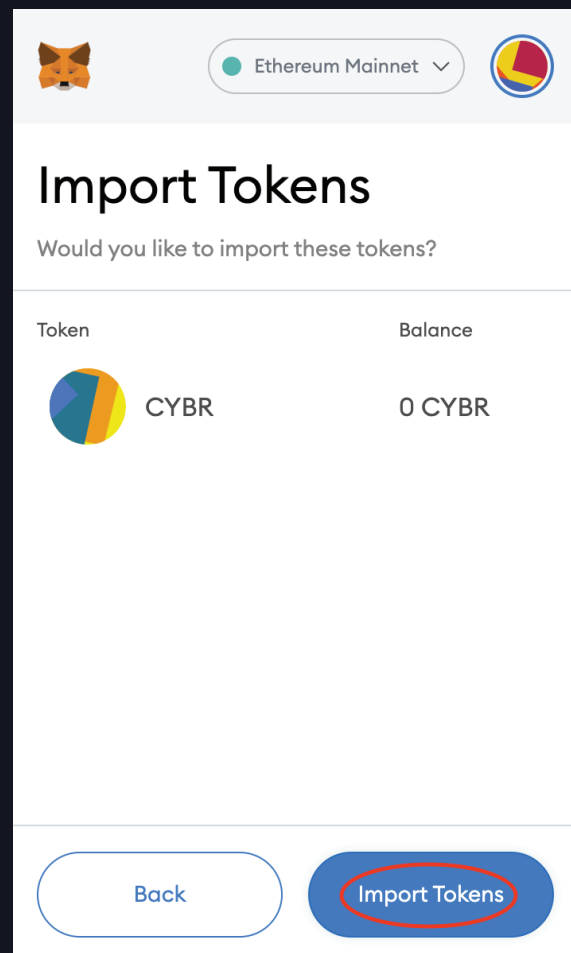

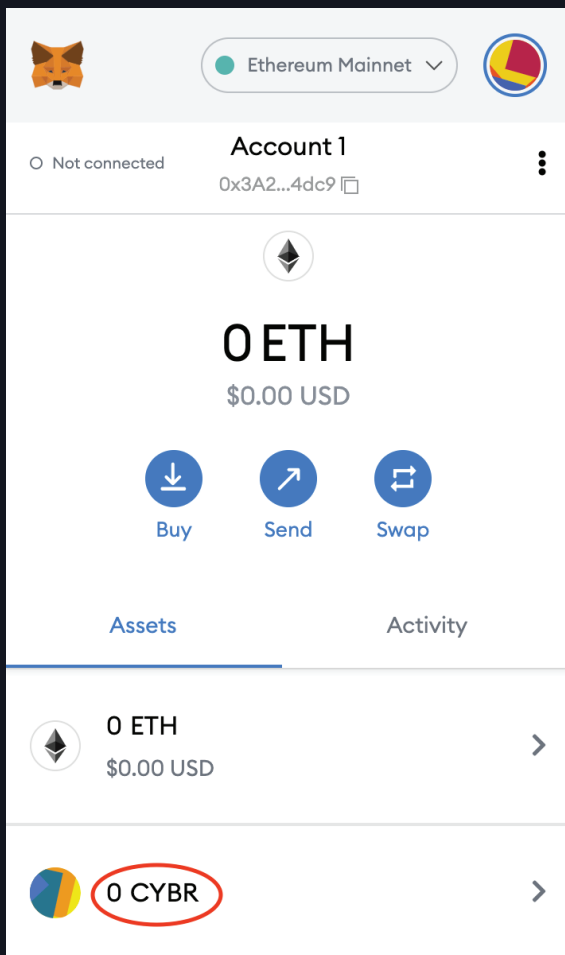

Step 6

Go back to your **"assets"** tab, and you will see the new CYBR token in your wallet. If the team has announced that the airdrop is complete, and you have not received your CYBR, do not worry. Contact a team member ASAP so we can make sure that you receive your CYBR.

ⓘ Please note

The old CYBR token will still show in your wallet as the amount you had prior to migration. This amount of CYBR will be worth nothing after the liquidity has been migrated to the new token. Think of it as a reminder of where we all came from, and how far we've come. Cheers!
